URLFetch("") .parse() .text() The present invention relates to digital image processing, and more particularly, to imaging systems that simulate depth-of-field. The use of digital imaging technology in photography is well known, especially in consumer applications. Improvements in digital imaging technology, such as improved low cost image sensors and the availability of powerful, inexpensive processors, has made digital cameras far more cost effective than film cameras. In addition, the image quality of digital cameras has been found to be better than that of film cameras. Moreover, many of the issues associated with producing photographic printing plates are not present when printing directly from a digital camera or print server. More recently, techniques have been developed to allow a photographer to use the benefits of digital imaging technology, while giving the appearance of using a traditional film-based camera. For example, photographic printers and computerized imaging software allow a user to simulate the use of a traditional camera in capturing images. In particular, such cameras collect either a two-dimensional or a three-dimensional representation of the physical object captured by the camera. Depth-of-field ("DoF") is a term that describes the area of the subject's appearance that is in sharp focus in a captured image. For example, when one is using a digital camera, the DoF is defined to be the area where the subject can be comfortably observed without any adverse blurring of the subject's features due to the limited size of the camera's sensor. The DoF may also include other effects of the subject's appearance, including "out of focus" areas that may be important for artistic or creative purposes. The properties of the subject's appearance, including its DoF, may be selected by the photographer either manually or automatically via in-camera settings, or through exposure settings on the camera, or by other types of settings. In photography, DoF is commonly referred to as "sharpness." In the case of a film camera, the DoF is also referred to as the "focal range"◆

The letter follows the news that Chief Secretary Karunakaran's letter to the Lt Governor requesting the suspension of the Special Leave Petition filed by KJ Alphons, President of the Bombay High Court Bar Association, is yet to be vetted. ALOHA HOU: The State Bar Association of Hawaii County has slammed the "wholesale" abolishment of the Legal Services service in the State, saying it is unconstitutional. The letter was a reaction to an earlier one written by John Masunaga, Chair of the LSAHC, to Karunakaran, Chief Secretary of Kerala, on June 1st, asking the Chief Secretary to cancel the Supreme Court order on legal services or go back to the Supreme Court to make a proper revision in the same. "As a result of recent developments in the State, all Legal Services in the State are abolished. This is an absolute travesty of Justice," says the letter. The letter further says that this course is illegal, as the High Court of Kerala is governed by the Constitution of India, a legislation under which legal service is regulated. "The Constitution of India, at Section 44, Article 14 declares that the State shall take all necessary steps to provide that the State shall not deprive any citizen of life
